

## VP800 Vapour-phase Soldering System

## **Technical Data**

maximal solder product format maximal height of solder product Energy supply (V) 3+N+PE Power drawn Average power consumption with full load Average power consumption at standby

Compressed air
Medium basic filling quantity
Medium consumption
Heating-up time ca.
Aspiration power

Cooling water inflow Cooling water outflow Cooling water pressure Cooling water

## **Option**

Cooling water-cooling system with compressor Power drawn

400 x 400 mm 85 mm 400 V / 3 / PE / N –50 Hz 5,5 kW 2 kWh 1 kWh

6 bar oilfree 15 kg 10 g/h 30 min 100 m³/h

Tube 1/2" Tube 1/2" 2 – 4 bar 10 – 18 °C

extern 2,0 kW

| Length A  |
|---|
| Width B   |
| Height C  |
| Height of loading- and unloading zone                         |
| Aspiration diameter Ø   |
| System weight without medium basic filling and cooling system |
| Weight Cooling water-cooling system with                      |
| compressor  |

Power- and consumption values are based on measurements of ASSCON Standard Soldering Systems and on normal operational conditions. In particular consumption of reflow fluid depends on i.a. products use and respectively customer-specific production requirement. Therefore in individual cases variations of power- and consumption values like mentioned above can arise.
